ENTERPRISE SOLUTION PITCH & TECHNICAL ARCHITECTURE SPECIFICATION

EDITH AML Intelligence Platform

High-Throughput Sanctions Screening, Dual-Database Sovereign Resilience, 50k Portfolio Sandbox & Certified Regulatory WORM Audit Ledger

Document ID: **EDITH-PITCH-v10.0** Classification: **Client Executive Briefing** Date: **October 26, 2026**

Runtime: **.NET 10 LTS | React 19 | OpenSearch 2.12 | PostgreSQL 17**

Regulatory Target: **UAE AML/CFT Federal Decree-Law No. (20) & FATF Recs 6, 7, 10, 11, 16**

Executive Summary: The EDITH AML Intelligence Platform is an enterprise-grade Anti-Money Laundering (AML), Counter-Terrorist Financing (CFT), and Sanctions Screening engine. Built to eliminate the critical failure points of legacy compliance systems—crippling latency, high false-positive rates, and inflexible cloud hosting—EDITH combines sub-150ms screening throughput, zero-Redis dual-database persistence, 100% sovereign on-premise deployment, and a full suite of 14 regulatory PDF reports. This specification details the **full catalog of 10 architectural modules** and **18 active compliance workflows** operating in the platform.

SECTION 1 ARCHITECTURAL DIAGRAMS & INFRASTRUCTURE TOPOLOGY

EDITH employs a **Zero-Redis Dual-Database Sovereign Architecture**. This model strictly segregates the transactional System of Record (SoR) from the read-heavy, low-latency Search and Entity Resolution Engine, ensuring zero write contention, high availability, and sub-second deterministic screening.

Diagram 1: Dual-Database Sovereign Architecture (System of Record vs. Screening Engine)

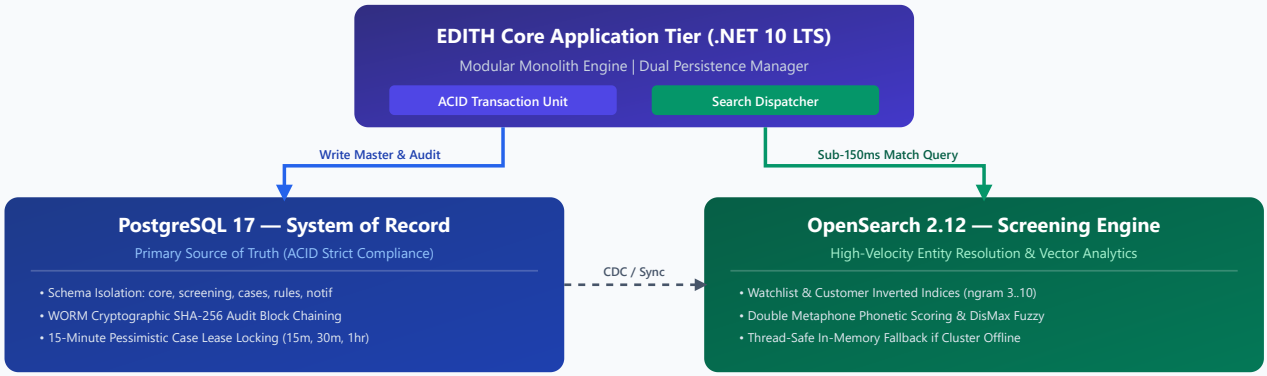

Figure 1.1: Physical separation of transactional state (PostgreSQL) from search index structures (OpenSearch) eliminates database locks during heavy transaction bursts.

Diagram 2: Data Synchronization Flow & Microservice Interaction

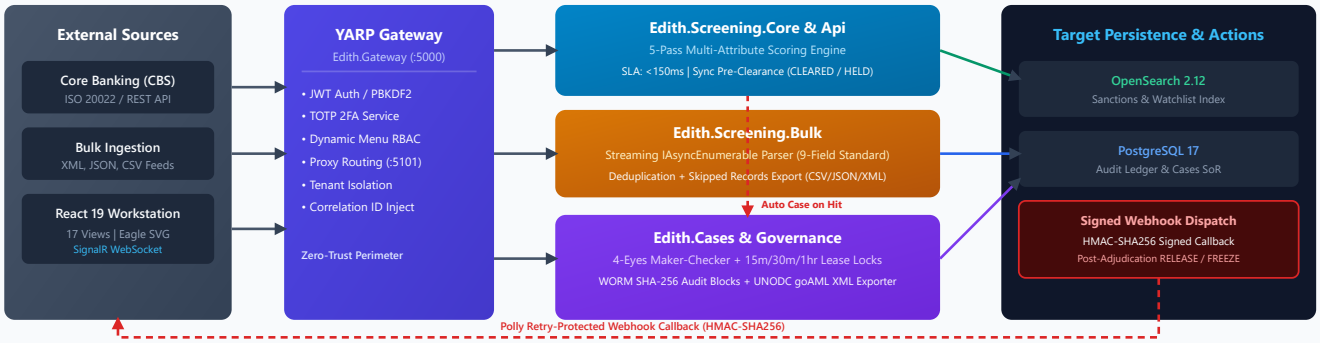

Figure 1.2: Orchestration pipeline from Core Banking System (CBS) transaction ingest down to maker-checker adjudication and signed webhook callbacks.

SECTION 2 COMPREHENSIVE CATALOG OF ALL 10 PLATFORM MODULES

EDITH is architected as a clean **Modular Monolith** running on modern **.NET 10 LTS**, coupled with a 17-view **React 19 Workstation**. Below is the exhaustive catalog of all 10 core modules, sub-engines, and specialized add-ons currently implemented:

Module Code	Module Name & Project	Type / Tier	Core Technical Responsibilities & Key Capabilities
MOD-CORE-GATE	**Edith.Gateway** (YARP API Gateway)	CORE	Reverse proxy routing (:5000), JWT validation, salted PBKDF2 IAM authentication, TOTP 2FA engine, dynamic group-to-menu permissions, rate limiting, and correlation ID tracing.
MOD-SCRN-CORE	**Edith.Screening.Core** (Screening Engine)	CORE	5-pass deterministic and phonetic fuzzy matching (Double Metaphone, Jaro-Winkler, Damerau-Levenshtein), multi-attribute composite scoring, target-type persona modes (Individual/Corporate/Vessel), PEP Tiers 1–3 diffing, and in-memory fallback.
MOD-SCRN-API	**Edith.Screening.Api** (Screening REST Service)	CORE	Exposes CBS pre-clearance endpoints (`POST /api/v1/screen/transaction`), single entity name search, whitelist suppression bypass, and idempotent request handling.
MOD-SCRN-BULK	**Edith.Screening.Bulk** (Streaming Ingestion)	CORE	Asynchronous memory-bounded streaming parser (`IAsyncEnumerable`) for CSV, XML, and JSON with 9-field AML mapping, duplicate skipping, and on-demand skipped record export.
MOD-CASE-WORK	**Edith.Cases** (Investigation Engine)	CORE	3-pane case investigation canvas, atomic 15-minute pessimistic lease locking with multi-duration renewals (15m, 30m, 1hr), 4-Eyes Maker-Checker state machine, categorized investigation notes, and SignalR live updates.
MOD-RULE-PROC	**Edith.Rules** (Transaction Rules)	CORE	Real-time transaction behavior rules (High-Risk Corridors, Smurfing/Structuring, Large Cash Limits, Velocity Anomaly detection), multi-mode execution (`REALTIME`, `SHADOW`, `PENDING_APPROVAL`), and 50,000-record portfolio backtesting sandbox with **Sensitivity Elbow Curve**.
MOD-EVENTS-CBS	**Edith.Events** (Webhook Dispatcher)	CORE	Cryptographic HMAC-SHA256 signed CBS webhook callbacks (`RELEASE` / `FREEZE`), Polly exponential retry policies with jitter, and unreachable dead-letter ledger recording.
MOD-DB-STORE	**Edith.Database.Migrator** (Persistence & WORM)	INFRA	Automated schema migrations for PostgreSQL 17 across 5 isolated schemas (`core`, `screening`, `cases`, `rules`, `notifications` — 39 production tables) and SHA-256 block-chained WORM audit ledgers.
MOD-ADDONS-EXT	**Edith.Addons** (Regulatory & AI Suite)	ADD-ON	UNODC goAML v5.0 XML payload generator (`MOD-GOAML-GCC`), GenAI STR Narrative Copilot (`MOD-AI-NARR`), and Multi-hop Entity Relationship Graph Visualizer (`MOD-AI-GRAPH`).
MOD-UI-PORTAL	**edith-portal** (React 19 Workstation)	UI	Complete 17-view compliance console with live WebSocket telemetry, What-If sensitivity slider, multi-line batch paste, inline adjudication slips, customer KYC 360 dossiers, and all 14 regulatory PDF reports hub.

Core Modules Deep-Dive

MOD-SCRN-CORE — Multi-Pass Screening & Entity Resolution

Implements the algorithmic 5-pass lifecycle: Normalization, DisMax broad retrieval, phonetic Double Metaphone, and composite multi-attribute scoring:

```
Score = (0.60×Name) + (0.15×DOB) + (0.15×ID)
                    + (0.10×Nat)
```

Includes dedicated schemas for Individual, Corporate (Trade License, Tax ID), and Maritime Vessel (IMO, MMSI, Flag State) personas.

MOD-CASE-WORK — Investigation Engine & 4-Eyes Governance

Enforces strict Maker-Checker segregation of duties:

- ✓ **Analyst:** Investigates hits, adds categorized notes (Investigation, Supervisor, Rationale), and escalates to `PendingApproval`.
- ✓ **MLRO:** Reviews escalated dossiers and executes final disposition (`ClearedFalsePositive` or `ReportedStrFreeze`).
- ✓ **Collision Prevention:** Pessimistic lease locking blocks competing analyst edits with `409 Conflict` (15m, 30m, 1hr renewals).

SECTION 3 COMPREHENSIVE CATALOG OF ALL 18 ACTIVE COMPLIANCE WORKFLOWS

The EDITH platform operationalizes compliance through **18 distinct, interconnected workflows** spanning real-time payment clearing, manual investigations, automated ingestion, regulatory reporting, and WORM audit verification:

1. User Onboarding, Crypto Password Provisioning & TOTP 2FA Workflow

IAM SECURITY

Enforces zero-trust operator access control with mandatory password rotation and RFC 6238 TOTP two-factor authentication.

1. Administrator provisions user in `IamAccessView.tsx`; `CryptoPasswordGenerator.cs` generates temporary high-entropy credentials.
2. Welcome email dispatched via `IEmailNotificationService.cs`; user accesses `/onboarding`.
3. User completes mandatory password change and scans QR code to activate TOTP 2FA via `ITotpService.cs`.

2. Dynamic RBAC Menu Entitlement Workflow

ACCESS CONTROL

Dynamically tailors the workstation navigation tree based on tenant-scoped user group permissions.

1. Administrator configures group permissions in `/settings/menu-mappings`.
2. `IEntitlementsService.cs` resolves authorized menu trees from PostgreSQL `core.group_menu_permissions`.
3. `Sidebar.tsx` dynamically filters and renders only permitted navigation groups and views.

3. Real-Time Synchronous Pre-Clearance Screening Workflow

<150MS SLA | CBS INTEGRATION

Enables instant payment clearance for real-time payment rails (UAE IPP, SEPA Instant, FedNow) with evaluate-and-hold guarantees.

1. Core Banking System (CBS) sends `POST /api/v1/screen/transaction` with an `Idempotency-Key` header.
2. Gateway validates JWT and routes payload to `Edith.Screening.Core`.
3. 5-pass screening evaluates Sender, Beneficiary, and Intermediary against OpenSearch 2.12 inverted indices.
4. **Clean (<80%):** Returns `HTTP 200 CLEARED` with digital clearance memo token in under 150ms.
5. **Match Hit (≥80%):** Returns `HTTP 200 HELD`, auto-provisions an investigation case in `cases.aml_cases`, and locks the payment ledger.

4. Universal Single Entity Name Search & In-Line Adjudication Workflow

ANALYST WORKSTATION

Interactive compliance lookup for ad-hoc customer onboarding and suspicious counterparty checks.

1. Compliance officer selects target persona mode (**Individual**, **Corporate**, or **Vessel**) in `NameSearchView`.
2. System queries OpenSearch indices using Double Metaphone and 3–10 edge n-grams.
3. Candidate hits display ranked match percentages, token highlight breakdowns, and sanction program tags.
4. **In-Line Adjudication Slip:** Analyst can dismiss false positives or escalate into a formal case with 1 click.
5. **Onboarding Clearance Memo:** For clean searches, generates a verifiable digital clearance memo with operator timestamp.

5. Interactive "What-If" Sensitivity Simulation Workflow

THRESHOLD CALIBRATION

Empowers compliance supervisors to simulate match sensitivity adjustments in real time without executing server queries.

1. Analyst loads screening candidate matches in the compliance console.
2. Officer drags the interactive **What-If Slider (50% to 95%)** across the candidate dataset.
3. Client-side engine instantly re-filters, re-ranks, and updates match badges in real time.
4. Supervisors evaluate false-positive impact before submitting formal threshold adjustment requests to IT.

6. Batch Multi-Line Clipboard Paste Screening Workflow

HIGH-VELOCITY SCREENING

Rapid ad-hoc screening of unstructured text or multi-column data directly copied from spreadsheets or emails.

1. Operator pastes multiple lines of raw text (names, IDs, nationalities) into the batch text area.
2. Client-side parser tokenizes and validates each line into discrete entities.
3. Entities are dispatched asynchronously in parallel batches to the screening engine.
4. Results appear in a consolidated table displaying line-by-line match scores, hit badges, and summary statistics.

7. Streaming Bulk File Ingestion, Deduplication & Skipped Export Workflow

MOD-SCRN-BULK

High-capacity ingestion of massive sanction watchlists and customer portfolios without memory exhaustion.

1. User uploads large CSV, XML, or JSON watchlist or customer files via `BulkScreeningView`.
2. `AmlStreamingParser` streams records via .NET 10 `IAsyncEnumerable` within bounded memory buffers.
3. Engine standardizes attributes into the 9-field AML schema and verifies uniqueness against PostgreSQL.
4. Existing records are skipped; skipped records are retained when `keepSkipped=true`.
5. SignalR streams real-time ingestion progress (rows/sec, hits); user downloads skipped duplicates in CSV, JSON, or XML.

8. Periodic Watchlist Delta Rescreening Workflow

AUTOMATED RESCREENING

Automated customer portfolio re-screening following the publication of new international or local sanctions lists.

1. New sanction feeds (UN, OFAC, UAE Local Terrorist List) are ingested into `edith_watchlist_v1`.
2. System triggers an asynchronous delta comparison between updated watchlists and active customer profiles.
3. Differential change-detection flags only newly affected accounts, suppressing unchanged historical matches.
4. Generated alerts are routed directly to the designated compliance review queue.

9. 4-Eyes Maker-Checker Case Investigation & Pessimistic Lease Workflow

MOD-CASE-WORK | GOVERNANCE

Strict segregation of duties for suspicious transaction investigation and formal resolution.

1. Screening hits auto-provision an `Open` case in `cases.aml_cases`.
2. **Analyst Lock:** Analyst opens the case and acquires an atomic 15-minute lease lock (with 15m, 30m, 1hr renewals); other analysts receive `409 Conflict`.
3. **Triage:** Analyst examines side-by-side PEP diffs, records categorized notes, and escalates to `PendingApproval`.
4. **MLRO Approval:** Compliance Officer reviews dossier and adjudicates: `ClearedFalsePositive` or `ReportedStrFreeze`.
5. Case resolves, lease releases, and audit ledgers record state transition with SHA-256 block hash.

10. Core Banking Signed Webhook Callback Workflow

MOD-EVENTS-CBS | CBS INTEGRATION

Cryptographically signed automated ledger callbacks notifying core banking systems of final compliance dispositions.

1. MLRO adjudicates case in EDITH Workstation.
2. `ICbsWebhookDispatcher` constructs signed JSON callback (`RELEASE` or `FREEZE`).
3. Calculates HMAC-SHA256 signature using CBS shared secret and attaches `X-Edith-Signature` header.
4. Dispatches callback via Polly retry policy (exponential backoff across 3 attempts with jitter).
5. Permanently unreachable endpoints record undelivered payload to `notifications.delivery_ledgers` for reconciliation.

11. Regulatory STR / SAR `goAML` Reporting Workflow

MOD-GOAML-GCC | COMPLIANCE REPORTING

End-to-end generation and filing of Suspicious Transaction Reports adhering to UNODC goAML v5.0 standards.

1. Case adjudicated as `ReportedStrFreeze` initiates regulatory reporting workflow.
2. GenAI Narrative Copilot (`MOD-AI-NARR`) synthesizes case telemetry into a structured 5-section STR narrative.
3. Engine maps transaction details, counterparties, and entity profiles into official UNODC goAML v5.0 XML schema.
4. Compliance officer reviews generated STR package and downloads XML payload for upload to the national FIU portal.

12. Customer KYC 360 & UBO Tree Cascade Screening Workflow

CUSTOMER INTELLIGENCE

Visualizes beneficial ownership structures and performs 1-click simultaneous screening across corporate entities and all UBOs.

1. Analyst opens corporate customer profile in `/kyc360`.
2. Visualizes multi-tier UBO equity ownership hierarchy tree with equity percentages and PEP status.
3. Clicks **1-Click Cascade Screening**; system parallel-screens the legal entity, TRN, and all UBOs against watchlists.
4. Consolidated clearance matrix flags sanctioned owners and auto-updates the customer's risk profile.

13. Interactive OCR Document Inspection & EDD Sign-off Workflow

DOCUMENT VERIFICATION

Inspects identity documents with bounding boxes and tracks statutory Source of Wealth (SoW) corroboration.

1. Analyst opens passport or trade license in `/kyc360` document vault.
2. OCR Inspector renders extracted JSONB fields, per-field confidence scores, and visual bounding boxes.
3. Analyst verifies statutory SoW/SoF corroboration checklist items and signs off periodic EDD review.
4. Generates a WORM-sealed Customer EDD Audit Dossier with SHA-256 block hash.

14. Whitelist Exemption & False-Positive Suppression Workflow

ALERT REDUCTION

Controlled false-positive suppression with strict approval hierarchies and mandatory expiry dates.

1. Authorized officer identifies verified false-positive match during screening or case review.
2. Officer opens Whitelist Modal, specifies match criteria, legal justification, and expiration date.
3. Record is written to `screening.whitelists` and audited via SHA-256 block ledger.
4. Subsequent screening evaluations matching whitelist criteria are suppressed automatically (returning `CLEARED`).

15. AML Rule Authoring, Category Form Editor & Shadow Execution Workflow

MOD-RULE-PROC

Category-aware rule composition, velocity anomaly detection, and shadow-mode execution.

1. Compliance admin authors new transaction monitoring rule in `RuleBuilderView`.
2. Configures parameters via category form editor (High-Risk Corridors, Structuring/Smurfing, Velocity Anomalies).
3. Pre-save draft backtest evaluates sample triggered transactions against recent transaction logs.
4. Administrator stages rule in `SHADOW` mode to monitor alert velocity before live promotion.

16. 50,000-Record Portfolio Backtesting Sandbox & Calibration Workflow

THRESHOLD CALIBRATION

Replays historical transaction archives to calculate Sensitivity Elbow Curves and auto-balance scoring weights.

1. Officer adjusts composite scoring sliders with auto-balance and pin-locks in `RuleSandboxView`.
2. Initiates high-speed simulation against a 50,000-record historical transaction archive.
3. System calculates Baseline Delta, Ground-Truth STR Recall, and 5-point **Sensitivity Elbow Curve**.
4. Officer promotes optimal threshold to active configuration with WORM SHA-256 audit logging.

17. All 14 Regulatory PDF Reports & 16-Field Query Workflow

REGULATORY COMPLIANCE

Generates and exports all 14 official regulatory reports with 16-field multi-parameter query filtering.

1. Officer selects target report from Section 4e Reports, Section 4f Log Reports, or Cross-Module Reports.
2. Applies progressive 2-tier filter bar covering all 16 transaction attributes.
3. 3-day EDD & 7-day SLA auto-escalation watchdog flags approaching central bank statutory deadlines.
4. Exports self-auditing CSV/JSON bundles or generates printable Certified Regulatory Examination Reports.

18. WORM Cryptographic Audit Chain & Verification Workflow

MOD-DB-STORE | AUDIT INTEGRITY

Immutable, tamper-evident audit logging fulfilling central bank examination and forensic standards.

1. Every state change writes to `core.audit_ledgers` chained to `previousBlockHash` via SHA-256.
2. Auditor opens `/reports` and clicks **Verify WORM Cryptographic Chain**.
3. Engine validates hash chain continuity from Genesis Block through every live transaction event.
4. Outputs cryptographic attestation certificate verifying zero tampering across the audit ledger.

SECTION 4 STRATEGIC CLIENT VALUE PROPOSITION (THE COMMERCIAL PITCH)

Why leading commercial banks, exchange houses, and tier-1 FinTechs choose EDITH over legacy AML suites. EDITH bridges the divide between strict regulatory compliance and low-friction customer transaction velocity.

PILLAR 1 Sub-Second Latency & Extreme Scalability

The Industry Problem: Real-time payment systems (UAE IPP, SEPA Instant, FedNow) mandate strict 500ms settlement limits. Legacy AML tools requiring 1–3 seconds cause payment timeouts and merchant drop-offs.

- ✓ **<150ms P99 SLA:** Executes 5-pass multi-attribute screening in milliseconds within synchronous payment pre-clearance budgets.
- ✓ **High-Throughput Scaling:** Sharded OpenSearch indices and stateless .NET application replicas handle 50,000+ transactions per minute during peak volume spikes.

PILLAR 2 Sovereign On-Premise & Local Deployment

The Industry Problem: Stringent data sovereignty mandates (UAE Banking Secrecy, GDPR, SAMA) prohibit transmitting customer PII to offshore SaaS vendors or shared cloud environments.

- ✓ **100% Sovereign & Air-Gapped Capable:** Deploys on bare-metal, private Kubernetes, or sovereign local cloud. Zero telemetric data leaves your banking perimeter.
- ✓ **Bank-Grade Security:** Salted PBKDF2-SHA256 password hashing, TOTP 2FA, TLS 1.3 encryption, and WORM SHA-256 chained audit ledgers.

PILLAR 3 Unrivaled Precision & False Positive Reduction

The Industry Problem: Global AML compliance averages 95% false-positive rates, overwhelming compliance departments and multiplying operational overhead.

- ✓ **Up to 70% Alert Reduction:** Multi-attribute composite scoring balances primary names with secondary corroborators (DOB, nationality, passport details).
- ✓ **Intelligent Whitelist Suppression:** Eliminates repetitive alerts on verified entities while preserving verifiable audit trails.

PILLAR 4 Frictionless Core Banking & API-First Design

The Industry Problem: Legacy AML software requires expensive multi-month integration cycles and proprietary middleware adapters.

- ✓ **Dual CBS Integration:** Synchronous evaluate-and-hold HTTP pre-clearance alongside automated HMAC-SHA256 signed `RELEASE` or `FREEZE` webhooks.
- ✓ **Multi-Format Turnkey Ingestion:** Ingests XML, JSON, CSV, and clipboard batch pastes instantly with automated UNODC `goAML` STR XML export.

Regulatory Compliance & Rigorous Engineering Verification

Regulatory Framework	Specific Mandate & Scope	EDITH Platform Technical Control & Guarantee
UAE Federal Decree-Law No. (20) of 2018	AML/CFT compliance, suspicious activity identification, and mandatory customer due diligence (CDD).	Multi-role entity evaluation (Sender, Beneficiary, Intermediary) with KYC 360 customer profile dossier bridging and UBO cascade screening.
UAE Cabinet Decision No. (74) of 2020	Immediate execution of Targeted Financial Sanctions (TFS), Local Terrorist List & UNSCR updates.	Real-time streaming watchlist ingestion with immediate inverted-index synchronization (<2 minutes end-to-end).
FATF Recommendations 6, 7, 10, 11 & 16	Targeted financial sanctions, wire transfer originator/beneficiary transparency (Travel Rule), and recordkeeping.	Dual-mode CBS integration with cryptographically signed HMAC-SHA256 ledger webhooks and immutable WORM audit logs.
4-Eyes Maker-Checker Governance	Segregation of duties: analysts investigate; MLRO / Compliance Officers approve final adjudication.	Pessimistic 15-minute case locking (with 15m, 30m, 1hr renewals), strict state machine enforcement, and digital Onboarding AML Clearance Memos.

Proven Production Quality: EDITH's core engine is validated by an automated enterprise test suite spanning **10 test projects** and **103 comprehensive test cases (92 offline passing tests verified)** achieving **100% pass rate** (0 failures, 0 skipped), ensuring complete algorithmic reliability under high transaction volumes.

The Executive Decision: Transform Compliance from a Cost Center into a Competitive Advantage

By implementing EDITH, your institution slashes manual operational investigation overhead, eliminates regulatory non-compliance exposure, and delivers instantaneous transaction clearance for your retail and institutional clients. Contact the EDITH engineering team to schedule an on-premise technical demonstration or sandbox integration trial.
